

One health European Joint Programme (OHEJP)

Introduction

What is OHEJP

- The OHEJP is a partnership between 37 food, veterinary and medical laboratories and institutes across 19 member states in Europe, and the Med-Vet-Net-Association.
- The focus is to address the existing and emerging threats of zoonotic disease and antimicrobial resistance in a One Health concept.

<https://onehealthjep.eu/>

Many of these projects are of interest to our network, especially the integrative projects, which aim to develop joint resources (infrastructure and work processes) across the three domains of the OHEJP

Projects with special relevance to our network

CARE

CARE: Cross-sectoral framework for quality Assurance Resources for countries in the European Union

- Started January 2020. Coordinating institute: DTU
- Focus on developing cross-sectorial proficiency testing (PT), reference materials and quality/availability of demographic data.
- Strong involvement of EURLs

DiSCoVer

DiSCoVer: Discovering the sources of Salmonella, Campylobacter, VTEC and antimicrobial resistance

Started January 2020. Coordinating institute: DTU

- Focus on source attribution:
 - Collect existing and new data
 - Apply different methods and models
 - Develop methods for critical assessment of results
